Innovative Technology with Tradition

For over 15 years ELRO Peristaltic Pumps in form of mobile and stationary units have established themselves in the positive displacement pump market as indispensable products for industry.

Day in and day out these pumps demonstrate their reliability and efficiency under the most demanding operational conditions.

Over decades the range of peristaltic pumps has been completed by intensive research, development and the use of new materials. The product range includes the widest material selection for pumping hoses offered by any manufacturer of peristaltic pumps.

The quality demands of customers as well as ease of operation and maintenance are uppermost in the manufacture of these products.

The latest production methods, inspection and testing systems for quality assurance and documented production sequences in compliance with DIN EN ISO 9001 are the basis for constantly outstanding quality of the peristaltic pumps.

With this wide product range ELRO pumps are able to meet most customer requirements, even in extremely difficult pumping processes.

Traditional values in combination with long experience and the available pump/application know-how enables customer and market specific solutions in agreed timescales.

By using the latest technologies, modern manufacturing methods and reliable service the range of ELRO Peristaltic Pumps will continue to maintain its first class position with the users in the future.

Benefits at a glance:

- ideal for abrasive, viscose and shear sensitive media
- gentle pumping of liquid or viscous products
- constant volume capacity due to vacuum support
- dry running resistant
- integrated early warning system (series IP)
- pumping of media with entrained solids
- unobstructed fluid flow – easy cleaning
- free of dynamic and pressure loaded seals
- portable units Series M300
- infinite regulation of capacity
- high pumping pressures of max. 13 bar / 188 psi for Series IP and XP
- dry self-priming up to max. 9.5 m / 31 feet lift
- easy operation and servicing, only one wear item
- also suitable for explosive environments (Ex-version)
Peristaltic Pumps

ELRO peristaltic pumps with accessories can be used for many applications and are not restricted to a specific installation location. Fixed installation directly into the process flow is possible, as is the use as mobile or portable unit that can be transported to different applications. The standard version of the pump set-up is the combination: ports on left-hand side (suction side top – pressure side bottom, red).

Of course, the IP series peristaltic pumps may be adapted to existing installations by modification of the port configuration. This only requires the relocation of the stainless steel pipe connections on the suction and discharge side of the vacuum system to suit the desired condition. This can be done without additional machining. Products of series XP are designed with feed and return flow as standard.

Possible installations

- Ports left hand side
- Ports right hand side
- Ports on top
- Ports on bottom (IP full fabric material hoses)
Flexible, Modular System

**ELRO Peristaltic Pumps, Series IP and XP**

- **Lubricant filling**
  - Silicon oil
  - Glycerine

- **Material**
  - Stainless steel
  - Polypropylene, electric conductive
  - PVDF

- **Ports on suction and discharge side,**
  - Series IP - male thread
  - Series XP - Male thread DIN or ANSI flange
  - Suction side left-hand top (standard)
  - Suction side left-hand bottom
  - Suction side right-hand top
  - Suction side right-hand bottom

- **Early warning system**
  - (only for series IP)
  - Vacuum switch
  - Conductivity measurement

- **Paint finish**
  - Pump housing
  - Silver (standard)
  - Acid proof paint
  - Customer-specific according to RAL

- **Lubricant filling**
  - Silicon oil
  - Glycerine
Hose materials
Natural rubber (NR) - IP / XP
Natural rubber (NR) FDA - IP
Nitrile (NBR) - IP / XP
Nitrile (NBR/E) electrically conductive - IP
CSM - IP / XP
EPDM - IP
Natural rubber (full fabric) - IP

Pressure ratings / rotor
0 - 2 bar / 0 - 29 psi
2 - 4 bar / 29 - 58 psi
4 - 6 bar / 58 - 87 psi
6 - 8 bar / 87 - 116 bar
8 - 10 bar / 116 - 145 psi
10 - 13 bar / 145 - 188 psi

Operation of Series IP and XP

A The rotor rotates within the pump housing filled with lubricant and compresses the pumping hose with the sliding shoe (1). This process generates a hermetic separation between suction and discharge side.

B Once the second sliding shoe (2) compresses the hose, a completely enclosed pumping chamber is formed. This volume corresponds exactly to half the pump capacity per rotation. A vacuum is also generated inside the pump housing, supporting the elasticity of the hose allowing restoration to its original full cross-section.

C The rotation of the rotor forces the pumped medium inside the hose towards the outlet port on the discharge side. During each opening of the hose a vacuum is created on the suction side ensuring constant suction. It also takes place when the hose is empty giving high suction conditions.

D With each rotation the pumping chamber is reformed and the suction capability is renewed.
Compact, mobile, adaptable

ELRO Peristaltic Pumps Series M300

Hose material
- Natural rubber (NR)
- Nitrile (NBR)
- CSM electr. conductive

Camlock connections
- Aluminum
- Polypropylene, electric conductive
- Stainless steel
- Bronze

Lubricant filling
- Silicon oil
- Glycerine

Pump cover
- For suction side right-hand (standard)
- For reversible operation (option)

Support
- CR

Separator
- PUR
The rotor turns inside the tightly fixed separator. Which is held in the pump housing filled with lubricant. The separator divides the housing into two completely enclosed areas. This means during compression of the pumping hose the suction and discharge sides are hermetically separated.

Air from the suction side is pumped over the separator by the turning of the rotor and exhausted outside the pump. This forms a vacuum inside the pump chamber relative to the suction lift, which supports the elasticity of the hose during restoration to its original full cross-section.

Once the second sliding shoe compresses the hose, a pumping chamber is formed. This volume corresponds exactly to one-third of the pump capacity per rotation. The rotation of the rotor presses the medium inside the hose towards the outlet on the discharge side. During each opening of the hose a vacuum is created on the suction side ensuring constant suction. It also takes place when the hose is empty giving high suction lift conditions.

With each rotation the pumping chamber is reformed and the suction capability is renewed.

Available drives:
- Electric motor 400 V AC
- Electric motor 230 V AC
- Electric motor Ex-version
- Petrol engine
- Diesel engine
- Hydraulic motor
- Pneumatic motor
- Water turbine

Paint finish:
- Pump housing: Silver (standard), Acid-proof paint, Customer specific according to RAL
Selection, Pump Capacity

For the selection of the mobile ELRO Peristaltic pumps series M300, the following factors are to be considered:
- pumping medium
- pumping capacity
- suction and discharge conditions
- operation time per day
- location of use
- accessories with suitable couplings

The most essential points for low wear operation of stationary peristaltic pumps series IP and XP are apparent by the following dependencies:
- pumping media \(\Rightarrow\) speed
- media temp. \(\Rightarrow\) reduction of flexibility
- discharge \(\Rightarrow\) pinch of hose pressure
- operation time \(\Rightarrow\) continuous intermittent short time

After fixing the operation point, depending on the above parameters, an exact specification of the pump can be made using the individual data sheets. Using the selection diagram, adjustments may be necessary after consideration of the factors “Operation time/day and media temperature”.

At a media temperature >40°C/140°F, hose life is shortened and a speed reduction should be considered.

- Short-time operation (max. 4 hours)
- Intermittent operation (max. 12 hours)
- Continuous operation (24 hours)
Elastomers

Natural rubber (NR)  IP M300 XP
Composition: natural substance, high-polymer isoprenes
Properties: tension-resistant, elastic, cold-resistant, approved for food applications
Operative range: for abrasive media, diluted acids and alkalis
Temperature range: -20°C - +80°C
-4°F - 176°F

Natural rubber (FDA)  IP

Nitrile rubber (NBR)  IP M300 XP
Composition: mixed polymeride from butadiene and acryl nitrile
Properties: wear-resistant, grease and oil resistant
Operative range: for oily and greasy media, alcohols
Temperature range: -10°C - +80°C
+14°F - 176°F

Hypalon (CSM)  IP M300 XP
Composition: elastomer formed through polymerisation of chlorosulfonated ethyls
Properties: chemical resistant, wear resistant and electric conductive (only M300)
Operative range: for acids and alkalis, colours
Temperature range: -20°C - + 80°C
-4°F - 176°F

EPDM  IP
Composition: EPDM rubber through co-polymerisation of ethyl, propylene and diene
Properties: chemical resistant, good insulating properties and outside applications
Operative range: for acids and alkalis, hot water
Temperature range: -30°C - + 80°C
-22°F - 176°F

For further details see our separate compatibility guide

For special applications, special full fabric hoses are available for the series IP.

ELRO peristaltic pumps can be equipped with a suitable pumping hose for almost any application. The great variety of different hose materials results from intensive research and long-term tests.

Hose manufacturing

All ELRO pumping hoses are precision ground after the production process. This additional process ensures an uniform surface and a constant outside diameter compared with conventional hoses. It prolongs hose life and in addition, a consistent pump capacity is achieved for all pumps.

Housing material

The pump housings of the ELRO peristaltic pumps are cast from aluminium. This process which is more complicated than steel casting or welded designs is used for the following reasons:

- better heat dissipation
- integration of cooling ribs
- air tight housing
- reduction of wall thickness
- compact construction
- wear resistant
- low weight

For further details see our separate compatibility guide

For special applications, special full fabric hoses are available for the series IP.
ELRO Peristaltic Pumps
Series IP

The IP series of ELRO peristaltic pumps distinguish themselves through a gentle transport of liquid or viscous media. Also capable of handling abrasive, shear-sensitive products with long fibres and solids. Over the years they have become an integral part in the pump pool of many operators.

The 13 bar / 188 psi pump pressures of the standard versions make ELRO peristaltic pumps suitable for replacing other pump technologies. The seven pump sizes, various hose materials including food approved versions and the different port options allow individual adaptation to each application. This variety is further expanded by the frame and motor variants.

ELRO peristaltic pumps are equipped as a standard with a patented vacuum system. It leads to many economic and technical advantages such as:

- very good suction properties up to 9.5 m / 31 feet lift (no additional suction equipment required)
- constant pump capacity during the entire hose life
- enables the hose to reform to its full cross section
- low reduction in capacity when handling very viscous media
- use as early warning system for a just in time hose exchange

</table>
The patented early warning system (see illustration right 2, 3) works as follows: Each hose is provided with a small additional channel through which the air in the upper section of the pumping chamber is evacuated from the pump housing. Therefore, a vacuum is formed in the sealed aluminium housing. In the case of damage or normal wear of the hose, the vacuum will drop.

The early warning can be seen through the installed vacuum gauge. An acoustic or optical signal can be activated by using the vacuum switch 1.

By this, the hose condition is monitored for optimum service planning.

Downtimes through normal wear can be predicted.
The newly developed ELRO peristaltic pumps of series XP are characterized by a high pumping capacity at low rotary speed. The amply dimensioned cross-section of the hose enables the transport of fluids with high solids content.

Series XP is equipped with the newly developed vacuum system integrated in the pump housing as standard. In connection with the specially manufactured thin-walled peristaltic hose these pumps are characterized by excellent suction properties and long hose lives.

This new design offers numerous economical and technical benefits, e.g.

- high pumping capacity at low rotary speed
- approved compact design
- safe to run dry
- integrated vacuum system
- dry self-priming max. 9.5 m
- due to the vacuum support transfer of highly viscous products
- discharge pressure max. 13 bar
- ideal for long fibrous materials and solids up to 60 mm
- forward and reverse pumping possible by standard
- the vacuum support ensures a constant pump capacity over the entire lifetime
- various materials for hoses and connections available
Main application:
- Chemical industry
- Ceramic and porcelain industry
- Construction industry
- Power plants
- Colour and painting industry
- Waste and disposal industry
- Galvanic industry
- Waste water plants
- Slaughter-houses

The integrated vacuum system (see illustrations 1, 2, 3 right) works as follows: The rotor rotates inside the lubricant filled pump housing and squeezes the pumping hose with the sliding blocks. At the same time the rotor mounted sliding blocks 3 compress diaphragm 1, which is integrated in the pump cover. This pumping process discharges the air from inside the housing through the exhaust in cover 2 to the outside.

ELRO Peristaltic Pumps of series XP can also be equipped with a vast variety of accessories.
The IP and XP series of ELRO peristaltic pumps are available with a variety of accessories for each application.

1. Early warning system EWS (only available for series IP), complete evaluation and signalling unit incl. pump head mounted sensors to measure temperature, housing pressure, operating pressure and vacuum.

2. Compensators in steel, stainless steel with matched elastomer materials

3. Flanges in steel, stainless steel and plastic according to different standards

4. Quick action couplings and fittings, e.g. coupling in stainless steel, brass and aluminium, DIN and triclamps

5. Suction/discharge hoses are available with nominal sizes between 1” and 4” and equipped with suitable coupling systems, completely pressure-tested. Standard spiral hoses with plastic and steel reinforcement, chemical hoses or suction/discharge hoses approved for food applications.

6. Pulsation dampers made of different housing materials: lacquered steel, polypropylene or stainless steel. Depending on the type of design and size with an inner membrane complete with fittings and pressure gauge.

7. Vacuum switch for checking the vacuum in the pump housing. Pressure drop = Alarm.

8. Conductivity sensors for the conductivity measurement. If conductivity fluid is mixed with the medium = Alarm.

Complete details can be found in the accessories catalogue.

### Suction Side Accessories

- 5

### Discharge Side Accessories

- 6
ELRO M300 series Peristaltic Pumps were designed for safe, quick and mobile applications in the most varied industrial operating conditions. Over many years this unique, patented pump system has been and is successfully used world-wide for more and more new applications.

The basic idea during the development of the mobile peristaltic pumps was to integrate the advantages of standard peristaltic pumps and to achieve a compact, portable and flexible design. This idea was realised through a special, patented concept in the pump housing design.

It enables the use of thin-walled pumping hoses which are continuously expanded to their full cross-section by the permanent vacuum. Pumping capacities up to 22 m$^3$/h (97 USGPM) can be achieved.

Examples of application: Emergency pump on ships, sanitary disposal unit for fast trains, loading pump for road tankers, at power stations and sewage plants for sampling and for cleaning tanks and basins, in the chemical industry, for fluid transfer duties.

These pumps prefer a long suction line up to the absolute vacuum whereby suction lengths of more than 50 m (164 feet) are frequently used.

The discharge pressure should not exceed 2 bar (29 psi).
Main Application:
- Environmental technology
- Tank cleaning
- Building industry
- Chemical industry
- Forwarders
- Power stations, disposal technology
- Ships, port facilities and skimmer

The peristaltic pumps can be equipped with different hose materials depending on applications as well as with couplings on the suction and discharge side in different materials and designs.

The M300 series can be selected with a variety of different motors.

For special applications, the pump is also available in a reversible design. Therefore it is possible to pump in the opposite direction with the same performance features - a decisive criterion when pumping out and pumping over media which are harmful to the environment.

The design of all pumps enables changing of pumping hose and all components within shortest period of time without any additional special tools.
ELRO Peristaltic Pumps
Series M300

ELRO Peristaltic Pumps are available with a variety of accessories suitable for each specific application.

1. KL quick release couplings, pipe elbows, Storz couplings made of aluminium, brass or stainless steel, plastic, DIN, tank vehicle couplings made of brass or stainless steel.

2. Pulsation dampers made of stainless steel with suitable T-piece.

3. Suction/discharge hoses are available with nominal size between 1” and 4” and equipped with suitable coupling systems completely pressure-tested.

4. Standard spiral hoses with plastic and steel reinforcement, hoses for chemical applications as well as suction/discharge hoses approved for the food industry.

5. 180 litre (47.5 USGAL) transport drum made of stainless steel with filling equipment.

6. Hose cleaning device and balls in different designs.

7. Suction baskets, flat vacuum pick-ups, special suction pipes and residue suction nozzles made of various materials and in different designs.

Complete details can be found in the accessories catalogue.
### Suction Side Accessories

#### Connections
- **A**: Aluminium
- **K**: Polypropylene
- **R**: Brass
- **S**: Stainless steel

#### Hose / lubricant
- **B**: NBR+silicon
- **C**: CSM + silicon
- **D**: NBR + glycerine
- **G**: NR + glycerine
- **H**: CSM + glycerine
- **N**: NR + silicon

#### Special suction pipe
- **Ball valve**
  - **2" male**
  - **Stainless steel**

#### Residue suction nozzle
- **Disc strainer**, aluminium, stainless steel
  - **2" female**

#### Transport drum 180 l
- **Vacuum hose 1"**

#### Option
- **Hose cleaning balls**, hose cleaning device
- **Dairy pipe screwed joint DIN**
- **Tank vehicle coupling with double nipple**
- **Suction basket**, stainless steel 2" female
- **Special suction pipe**
  - **with ball valve**
  - **1 1/2" AG**, stainless steel
- **Suction pipe extensions**
- **Suction pipe**, 1 1/2" AG, stainless steel
- **Suction basket**
- **Suction shovel**, pointed, flat, gap nozzle
