Innovative valves for critical temperature control.

Choose from a broad range of Tufline® valves specifically designed for handling temperature-sensitive fluids.

Worldwide capabilities pay off for Tufline customers.

With facilities in a dozen countries around the world, Xomox has unique capabilities for global sourcing of the latest technologies, innovative materials, and the most sophisticated manufacturing techniques.

The Xomox team turns these resources into problem-solving valves for your most demanding applications.

Problem solvers.

Talk with a Xomox Sales Engineer about any aspect of your fluid handling system. You will get process-improving answers.

Your Xomox Sales Engineer has the proven products and is backed by the technical expertise to help solve your toughest fluid handling problems.

Customer focus, customer satisfaction.

Xomox strives to fully understand your unique needs, and cost-effectively fulfill your requirements.

Processors know they can depend on Xomox for trouble-free fluid control equipment and superior service.

Knowledgeable people.

The Xomox team works with you to assure optimum valve performance.

Your Xomox support team includes Sales Engineers, Authorized Distributors, Service Center Technicians, and Application Specialists.
Tufline Jacketed Sleeved Plug Valves offer all the attributes of Standard Tufline Sleeved Plug Valves.

360° lips break up and remove adhering, scaly deposits from the outer surface of the plug as it rotates.

Tufline Sleeved Plug Valves provide superior sealing, exceptional emissions control, ease of automation, and long-term reliability . . . all at a standard valve price.

For superior in-line sealing, the locked-in PTFE sleeve completely surrounds the plug. Tight sealing is assured because of the concentrated compression of the sleeve’s large circumferential sealing surface against high-pressure ribs.

Tufline Sleeved Plug Valves provide primary and secondary sealing elements to prevent leakage along the stem to the atmosphere.

These valves can be operated with simple, standard quarter-turn actuators. Because of the lubricity of the PTFE sleeve, they open and close easily, even after not being operated for greatly extended periods of time.

All jackets are rated at 235 psi to 400°F. Standard jacketed valve bodies are available in carbon steel or 316 stainless steel.

Dimensional data is on the following page.
**Jacketed Sleeved Plug Valve Dimensions**

*Dimensions are in inches. Weights are in pounds.*

For actuator mounting dimensions, other additional dimensions, and full specifications, see the Tufline Sleeved Plug Catalog #329703.

Additional information is also available at www.xomox.com. You can also contact your nearest Xomox representative.

* On the valves where the “N” dimension is asterisked, the two top holes are only tapped as follows:
  8-inch valves: 3/4-10UNC-2B . . . 10-inch & 12-inch valves: 7/8-9UNC-2B

† 2½-inch valves are machined from 3-inch castings, but the flanges are machined to 2½-inch dimensions.

** X - NPT - 3 steam ports.

3-Way 1, 2, & 2½ inch valves have only 2 steam ports.

**More information.**

In the Tufline Sleeved Plug Valve catalog you will find:
- Pressure-temperature ratings
- Cv factors
- Operating torques
- Actuator mounting dimensions
- A comprehensive listing of options, body materials, plug materials, sleeve materials, and operators
- Comprehensive ordering guidelines
Jacketed Metal-Seated Plug Valves

These valves are normally supplied non-lubricated with metal-to-metal hand lapped seating. There are no liners or separable seats in which fluids can lodge and degrade. Two, three, and four-way valves are available. Lubricated models are also available.

This extra heavy plug shank protects against damage from excessive torque.

Extra deep stuffing boxes with more packing provide better sealing.

Smooth internal contours and 100% flow area minimize pressure drop.

A tight metal-to-metal seal. (Media must have a viscosity of 500 centipoise or greater to assure a tight seal.)

The full jacket extends from flange to flange and fully around all fittings. This maximum heat transfer area assures rapid consistent heating.

The external adjusting screw regulates plug seating and allows easy disassembly.
Typical applications:
- pitch
- sulfur
- resins
- adhesives
- foods
- molten nylon
- polypropylene
- polyesters
- polymers

Materials:
WCB with stainless steel trim.
Other materials available upon request.

Pressure classes:
ANSI B16.34 Classes 125, 150, and 300 are standard. Other classes are available upon request.

Temperature rating: Up to 650°F.

Sizes:
1-inch to 8-inches are standard.
Other sizes available.

Operators:
Wrench handle to 4 inches.
Geared, 6 inches and above.
Air and electric actuation available.

How to order:
Specify size, figure no., CB, pressure class, material, operator, and any special features required.
Example:
2x3 - CB125 - WCB/316 - Wrench

Valve type selection:
Within its temperature and pressure limits the jacketed sleeved plug valve performs better than the metal seated valve. The chart at the right shows the general operating parameters for both valve types.

Steam Traced Butterfly Valves

Patented design.
A number of patents make this valve unique and unmatched for handling temperature sensitive fluids.

Accumulation of sulfur and similar fluids is virtually eliminated.

Triple-point protection.
The Tufline Steam Traced Valve is the only valve that provides triple-point prevention of media solidification:

• Both the shaft and bearing area are fully heated.
• The steam is channeled from the shaft, around the full perimeter of the disc, and out the bottom shaft.
• A separate steam path circulates through each side of the body assuring complete and maximum temperature control.

Integral jacket.
The Tufline integral body jacket assures more efficient and economical heating.

Because the jacket is integral there is no chance of faulty field installation of the jacket.

Conventional jacketing failure.
Add-on jackets often have air spaces (cold spots) between the jacket and the valve body. These cold spots can allow media to solidify and accumulate.

Shafts and discs are far from the heat source, so media buildup is prevalent on these surfaces.

Conventional jacketing is grossly inefficient because of poor heat transfer.
The seat is also available in fire-tested and high-temperature models.

Dimensions are on the following page.
Steam Traced Butterfly Valve Dimensions

2-inch through 4-inch valves are steam jacketed around the body only.

Valves 6-inches and larger are steam traced both around the body as well as through the shaft and around the disc.

M* - For valves with carbon steel bodies, M = A.
U** - Valves with cast bodies may weigh less.
These bottom-mounted, bottom operated valves provide safe, reliable, and economical service in rail tank cars.

Choose from three styles:

- Fully steam traced - body, shaft, and disc . . . . . .STV-6
- Steam jacketed - body only . . . . . . . . . . .SJV-6
- Standard - non-steam traced . . . . . .TBFV-6

Designed specifically for tank car service.

The low profile significantly reduces skidding costs. The patented design is compact and light weight.

Operating costs are reduced because this unique design drains the tank car rapidly and totally.

A spring latch locking mechanism is built into the valve handle. This protects against accidental valve opening and automatically locks in the closed position.

Installation is fast and easy. This valve has proven itself with years of low maintenance extended service life.

Specifications.

Size . . . . . . . . . . . . . . . . . . . .6 inch
Body . . .Carbon or stainless steel
Disc . . . . . . . . . . . .Stainless steel
Shaft . . . . . . .17-4 stainless steel
Seat (standard) . .Glass-filled PTFE
Seat (optional) . . . . . . . . . . . .PTFE
Seat (fire tested) . . . . . . . . . .316SS/PTFE

Other sizes and materials are available upon application.

Dimensions are on the following page.

For more details about unique and patented features request the comprehensive Tufline High Performance Butterfly Valve Catalog.
Fully Steam Traced Rail Tank Car Valves . . . **STV-6**

Fully Steam Traced STV-6 Valves are designed to facilitate the handling of condensible, solidifying or highly viscous commodities such as sulfur, tar, and pitch.

These valves incorporate steam traced shafts and discs as well as integral steam heating of the valve body perimeter.

This highly efficient heating system prevents buildup on the sealing edge of the disc.

Also prevented are accumulation and solidifying in the shaft bearing area which could cause binding and high operating torques.

---

Steam Jacketed Rail Tank Car Valves - Body Jacketed Only . . . **SJV-6**

Integral steam traced jackets facilitate handling moderately viscous commodities.

This includes commodities such as caustic soda, phthalic anhydride, heavy crude vegetable oil and heavy petroleum fuels.

These valves increase unloading efficiency of commodities shipped from warm climates to colder climates.

The SJV has only body steam tracing. There is no disc steam tracing or disc steam connections at the shaft ends.

---

Unmatched performance.

These offer unique and patented features found in no other valve.

(U.S. Patent Nos. 4,542,763 and 4,688,594.)

---

The Xomox Special Products Group.

The Xomox Special Products Group custom designs, manufactures, and modifies valves.

Tufline Special Products valves are used in unusual, complex, or especially difficult applications.

Processors find that investing in these special valves pays off with greatly extended service life,
Xomox XRP™ Actuators

The unique features of Xomox XRP Pneumatic Rack & Pinion Actuators include:

• A balanced pinion which does not require an external retaining clip to prevent the pinion from blowing out.

• Individual single point adjustment for both the CW and CCW directions.

• 98 degrees of total travel on the most popular sizes.

• Vertically aligned air passages allow increased air flow minimizing cycle time.

Matryx Rack & Pinion Actuators

Matryx Rack & Pinion Actuators have a unique suspension system that guides each piston smoothly through its complete stroke, insuring consistent torque output.

Xomox Limit Switches

A wide variety of switching options and other automation accessories are available.

Matryx® Vane Actuators

Matryx Vane Actuators provide reliable and efficient remote control of any type of rotary operation. They are used for ball, plug, and butterfly valves as well as other mechanisms such as dampers, switches, and safety devices. They are available up to 30,000 in-lbs of torque.

Xomox Automation & Service Centers are located throughout the United States. They provide:

• Automated valve packages
• Valve modifications
• Valve repair
• Application assistance

• On-site inventories of valves, actuators, and accessories assure fast turn-around.

• A new-valve factory warranty backs every automated, modified, and repaired valve.

Xomox Sizing Program will help you design a more efficient and economical processing system and assure proper actuator size selection.
Global Capabilities For Global Customers

Worldwide capabilities.

No matter where in the world you are, Xomox technical support and services are available from:
- 16 Manufacturing Facilities
- 18 Service Centers
- 50 Sales Offices
- More than 200 Xomox Authorized Distributors

Product selection.

Xomox offers the broadest line of process valves, actuators, accessories, and related services including:
- Tufline® Process Valves
- Saunders® Diaphragm Valves
- Matryx® Rack & Pinion, Vane Actuators
- Xomox XRP™ Actuators
